New York City Residences That Harmonize Historical And Modern Elements

by [Haven Team](#)

520 Fifth | ALDEN STUDIOS

New York City, with its centuries-old history, showcases a captivating blend of the past and present. This duality is evident in much of the city's architecture, where historical elements seamlessly integrate with modern features. Let's look at some of New York City's residences that beautifully capture this unique fusion.

720 West End Avenue

720 West End Avenue, originally designed by Emery Roth in the pre-war era, is undergoing a transformation into a modern condominium with 131 luxury units in the highly sought-after Upper West Side. Built in 1927 with a Renaissance Revival-style exterior, the renovation team at BP Architects is committed to maintaining its original style and character. The interior renovation process is led by famed designer Thomas Juul-Hansen. Juul-Hansen's approach aims to seamlessly blend the pre-war charm with contemporary elements, featuring high ceilings, custom-finished architectural details and coveted River and city views, resulting in a captivating fusion that honors the building's rich history.
